

ABSTRACT OF THE DISCLOSURE

Computer executable software code stored on a computer readable medium of a computer, the code for generating a graphical user interface. The graphical user interface includes a plurality of room representations that each correspond to a room in a healthcare facility. Each of the room representations communicates a number of beds in a
5 corresponding room and identifiers of occupants of the beds in the corresponding room. The graphical user interface also includes an area communicating at least one of admits, discharges, bed holds, and room changes.
